

Synagogue in Kamionka Strumilowa

Description

The Kamionka Strumiłowa Synagogue was probably built in the first half of the 18th century in what is now Ukraine. Its architect is unknown. Since the late 19th century the Synagogue has been under conservation care. Temple was damaged during World War I and restored in the interwar period. Building was destroyed by Nazis in 1941 during the World War II. The Kamionka Strumiłowa Synagogue was one of the most valuable wooden objects in the eastern Poland. The main hall was roughly square in plan (13.00 × 12.00 m), height of the walls was 7.50 m, at the highest point of the vault about 9.50 m. Between 1852-1913 only one run was built into the gallery. There were runs in both extreme bays. In 1755-1852, along the walls of the sides of the hall were added one-story women rooms covered with pent roofs. Main body was covered by a two-storey roof - lower storey hipped, the upper storey semi-pitched. The roof over the gallery was cantilevered below the eaves of the main roof with triangular peaks at the end and above the protruding middle bay - small cupola. This digital reconstruction model from 2023 is based on documentation from IS PAN and drawings from Maria and Kazimierz Piechotka's book "Heaven's Gates."
